*Nonlinear relationship between the weather phenomenon El Niño and the Colombian Food Prices: Abril-Salcedo; Melo-Velandia & Parra-Amado*

Francisco A. Ramírez
Central Bank of the Dominican Republic
October 30-31, 2019
Authors analyze the impact of El Niño on food price dynamics in Colombia.

They are interested in:
- Asymmetric responses
- Persistence of El Niño shocks

Findings:
- Asymmetric and transitory impacts: 6-9 months
- Stable relationship between food inflation and El Niño.

Q: Is it possible to do the analysis by sub-groups or items belonging to the food group in the CPI?
